**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-30 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art of record taken alone or in combination fails to teach or suggest displaying apparatus, a method of manufacturing an image comprising the steps of: a: disposing a substrate, on which an electrical conductor and a wiring connected to the conductor are formed, on a support; disposing a container on the substrate so as to form a sealed gas-tight atmosphere defined by the container and the substrate, to cover the conductor with the container, except for part of the wiring; setting the container into a desired atmosphere therein; and applying a voltage to the conductor through the part of wiring, thereby forming at least one electron-emitting device at a part of the conductor to thereby form an electron source substrate; b: preparing a phosphor substrate on which a phosphor emitting light responsive to an irradiation with an electron emitted from the electron-emitting device is arranged, and disposing the electron source substrate and the phosphor substrate within vacuum atmosphere; c: carrying under a vacuum atmosphere one or both of the electron source substrate and the phosphor substrate into the vacuum atmosphere in a gettering process chamber, and subjecting to a gettering process only one substrate carried therein, or the one or both of the substrates carried therein; and d: after the gettering process, carrying under the vacuum atmosphere the electron source substrate and the phosphor substrate in

a seal-bonding process chamber, and subjecting to heat seal-bonding the substrates in an opposite state.

The prior art of record teaches a phosphor substrate and the electron source substrate being subject to a gettering process in a gettering process chamber and sealing the two substrates in a seal-bonding process chamber; however prior art of record taken alone or in combination fails to teach or suggest disposing a substrate, on which an electrical conductor and a wiring connected to the conductor are formed, on a support; disposing a container on the substrate so as to form a sealed gas-tight atmosphere defined by the container and the substrate, to cover the conductor with the container, except for part of the wiring; setting the container into a desired atmosphere therein; and applying a voltage to the conductor through the part of wiring, thereby forming at least one electron-emitting device at a part of the conductor to thereby form an electron source substrate in order to prevent any impurities from entering the substrate during the manufacturing process and thus prolong the lifespan of the device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
